Webasto ChargeConnect
Updates July 2023

Sequential installation of firmware updates Over-the-Air

The installation of a software update for the charging station, the so-called firmware, takes place with Webasto charging stations via the over-the-air procedure. This is easy to perform for the customer and is executed seamlessly in the background. Attention is only required when it comes to the correct sequence.
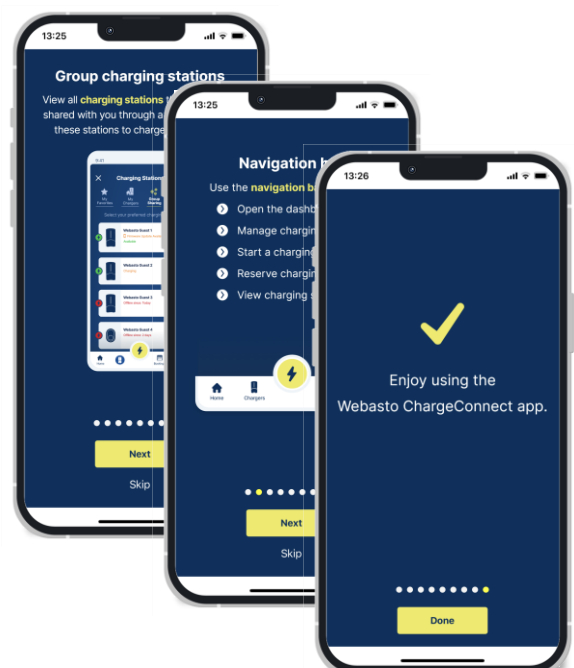

With the latest backend update, the firmware updates of the charging station are automatically installed sequentially and thereby the correct order of the software packages is always initiated by the backend.
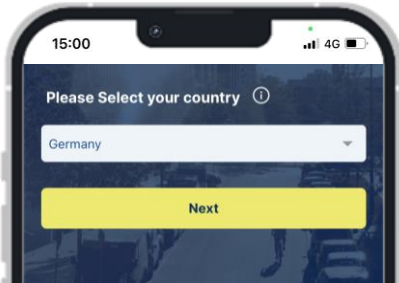

New In-App quick start guide

In the Webasto ChargeConnect app, users can enjoy a revised Quick Start Guide. All images have been adapted to the new layout, the texts have been reworked, and the content has been designed to focus on the most important functions.

The guide shows the following contents:
- Dashboard
- Navigation bar
- Managing charging stations
- Starting charging sessions
- Monitoring charging history
- Group management

Updates July 2023

**Feel the Drive**

Country selection at login

From now on, before each new login to the app, the user must select the current country. This ensures the correct assignment to the responsible server.

The selection is supported by a preview of the current country according to the smartphone information.
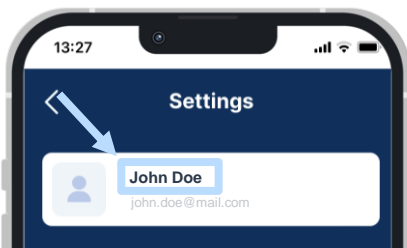

Setting groups charging stations as favorite

Until now, only the user's own charging stations could be marked as favorites within the app.

With the new app release in July, the same option is available for charging stations in the "Group Sharing" tab. This allows users to mark their preferred charging stations as favorites and be able to access them more quickly.

In addition, the charging stations are now sorted by name in all tabs. This makes it easier to find the charging station you are looking for.

Displaying the first and last name in the settings

With the new update, the user's first and last name is displayed in the user settings in addition to the already existing email address.
