

# Product Information

## Charging

September 2023

<b>Product:</b>	<b>Webasto Next</b>
-----------------	---------------------

### Subject

Release Notes 3.1.16 (OTA4)

### Information

- Country-specific adjustments for UK added:
  - For the purposes of the Off-peak charging Regulations, your vehicle will only charge during off-peak hours. Peak hours are now defined as between 8am and 11am, and 4pm and 10pm on weekdays. Peak hours do not apply at weekends. You have the opportunity to change or remove these hours.
  - Furthermore, with Randomised delay functionality, charging may not start immediately. It may take up to 1800 seconds (30 minutes) for charging to begin. You have the option of overriding this default setting in the WebUI.
- Local remote start function offers the possibility to authorize charging locally via the hotspot of the charging station and the WebUI, thus no internet connection is needed.
- Within the WebUI you can set the installation region of the charging station. This setting affects also the voltage tolerance.
- Renaming of ID Tag for Free Charging in WebUI is possible.
- Possibility to change WebUI password.
- General bug fix and performance optimization.
